

## 34 Wilding Exotic Trees

### 34.1 Purpose

The purpose of these provisions is to prevent the spread of wilding exotic trees. Wilding is the term used for the natural regeneration or seedling spread of exotic trees, occurring in unintended locations and not managed for forestry production.

The District values and relies on its distinctive landscapes, open spaces and rural productive land for its social, cultural and economic wellbeing. Wilding trees are spreading across parts of the District and have visually degraded parts of the landscape, biodiversity values and can threaten the productive values of the soil resource. The spread of wilding trees has left other areas vulnerable to landscape and biodiversity degradation.

The Council manages existing wilding trees through the non-statutory document, 'The Wakatipu Wilding Conifer Strategy'. The District Plan also has a role in reducing the potential for wilding tree spread by controlling the planting of wilding potential species.

### 34.2 Objective and Policy

**34.2.1 Objective - Protect the District's landscape, biodiversity and soil resource values from the spread of wilding exotic trees.**

#### Policy

34.2.1.1 Avoid the further spread of identified wilding tree species by prohibiting the planting of identified species.
